

Introduction

ACHEM Valve Controller was designed and manufactured by us based on "simple, efficiency and inexpensive" philosophy and technology innovation to help plants, platforms, and pipelines to improve productivity, increase safety and reduce cost. In following chart, you can find every member of ACHEM Valve Controller.

- **ALP series Valve Positioner** are able to control valve stroke (any position) accurately both for linear and rotary in line of the input signal of 4-20mA or 3~15psi which are all suitable both for the double acting and spring return actuator.
- **ALSD series Top Valve Controller** can senses and controls mechanical position (on/off) of valve based on electric, ASi Digital signals and pressure air supply.
